SUMMARY

Applied Bachelor of Informatics Engineering student at Universitas Logistik dan Bisnis Internasional focusing on Frontend Development, complemented by foundational backend skills. Experienced in building interactive web and mobile applications using Next.js, Flutter, and Vanilla JavaScript. Adept at collaborating in fullstack environments, integrating APIs, managing basic database operations, and leveraging AI-Assisted Development to accelerate coding efficiency and deliver high-quality user experiences.

EDUCATION

Universitas Logistik dan Bisnis Internasional <i>Applied Bachelor of Informatics Engineering – GPA: 3.60/4.00</i>	Bandung, Indonesia 2023 – Present
---	--------------------------------------

EXPERIENCE

Informatics Engineering Student Association <i>Public Relations Staff</i>	Bandung, Indonesia Jul 2025 – Jul 2026
---	---

- Successfully established partnerships and secured sponsorships from national-scale brands (e.g., Mie Sedaap, Promag) to financially support student seminar events.
- Managed professional external communications, including drafting proposals, negotiating with partners, and corresponding via official organizational email.
- Coordinated actively with internal and external stakeholders to ensure the successful execution of the association's main programs.

Industrial Visit (KI) Committee <i>Head of Public Relations Division</i>	Bandung, Indonesia Aug 2025 – Sep 2025
--	---

- Led the Public Relations division for the academic Industrial Visit program, managing all external corporate communications and partnership inquiries.
- Conducted targeted outreach and evaluated potential industry partners, specifically assessing the feasibility and program alignment between KCIC and CTIGroup.
- Successfully negotiated and finalized the institutional partnership with CTIGroup, facilitating a comprehensive industrial visit for 133 students.

PROJECTS

AI Q&A Agent
JAVASCRIPT, HTML, CSS, NODE.JS, GEMINI API

- Developed a specific AI question-and-answering agent as part of a broader multi-agent orchestration academic project.
- Took the initiative to design and build an interactive frontend interface using Vanilla JavaScript, going beyond the initial API-only requirement.

- Built a lightweight Node.js API to act as a secure bridge between the client-side and the Gemini API for processing real-time responses.

LogiTrack

FLUTTER, DART

- Collaborated in a 3-person team as the sole Frontend Developer, taking full responsibility for designing and building the entire mobile user interface.
- Developed comprehensive application modules, including the main Tracking Dashboard, Task Management, Delivery History, and User Profile using custom Flutter widgets.
- Implemented dynamic UI features such as interactive filter chips, a custom floating bottom navigation bar, and seamless Dark Mode integration to enhance overall user experience.

Nyumbangin (Public Donation App)

NEXT.JS, MONGODB, CSS

- Collaborated in a 2-person team to develop a creator-focused donation web platform, directly engineering the user interface into code without prior wireframing.
- Built comprehensive frontend modules for both users and creators, including the Landing Page, User Dashboard, Overlay Settings, Profiles, and Fund Withdrawal interfaces.
- Developed a dedicated Admin Dashboard to manage fund withdrawal requests and dynamically process feedback content for the main landing page.

Anime Review App

GOLANG, MONGODB, HTML, CSS

- Collaborated in a 2-person fullstack team for an academic capstone project (Proyek 2), taking the lead role in designing and developing the frontend architecture.
- Built key user interface components, including detailed anime information pages, interactive rating systems, and categorical content navigation.
- Contributed to the backend integration using Golang and MongoDB, ensuring seamless data flow from the database to the visual interface.

E-Voting Platform

LARAVEL, HTML, CSS

- Collaborated in a 2-person team to develop a web-based e-voting system using Laravel for an initial academic project (Proyek 1).
- Built a straightforward user flow utilizing Blade templates, encompassing secure authentication, candidate selection, and automated post-vote redirection.
- Developed a CRUD-based admin dashboard to manage candidate data, configure election deadlines, and dynamically publish final results to the homepage.

SKILLS & KNOWLEDGES

Programming Languages: JavaScript, Dart, Golang, PHP, HTML, CSS

Frameworks & Libraries: React.js, Next.js, Node.js, Flutter, Tailwind CSS, Laravel

Databases & Tools: MongoDB, SQL, Git, GitHub, API Integration (Gemini), AI-Assisted Tools
